

Therapy Monitor

The Monitoring Software in TDMS

Cardioprotective Haemodialysis **SPOT**

The Therapy Monitor is our solution for online documentation of various data collected before, during and after dialysis. The innovative bed-side monitoring is designed for advanced documentation on the 5008 CorDiox and 5008S CorDiox and thus directly at the bed-side of the patient.

Optimisation of resources

Less time is required for the documentation of patient data before and after dialysis

- Initial pre-setting of the dialysis device
- Bed-side monitoring via **data Xchange panel (dXp)**
- Automatic treatment documentation

Increased accuracy of compiled data

Increased accuracy of the patient data to be documented before and after dialysis

- Automatic recording of the patient's weight before and after dialysis
- Automatic treatment documentation
- Integration of peripheral devices

Shared use of data

Immediate and simple access to patient data for all users

- Overview of the status of current treatments
- Principle: "All information at a glance"

**FRESENIUS
MEDICAL CARE**

Therapy Monitor

The Monitoring Software in TDMS

Initial pre-setting of the device

The Therapy Monitor supports the user in the patient-specific pre-setting of the device. This means less time spent on the preparation of the treatment.

Documentation of the patient's weight before and after dialysis

Automatic documentation of the patient's weight before and after dialysis.

Bed-side monitoring

The innovative **data Xchange panel (dXp)** is designed for the direct input of data such as check lists and medication on the 5008 CorDiax and 5008S CorDiax and thus directly at the patient's bed-side.

Integration of peripheral devices

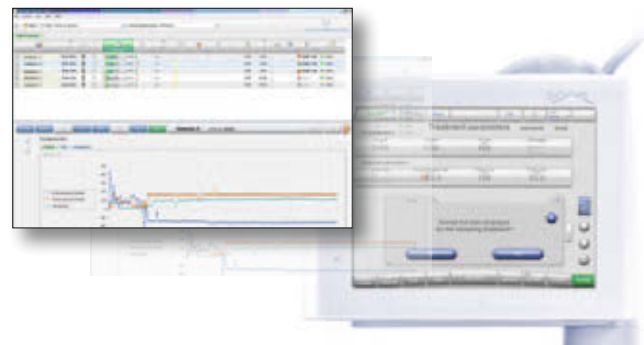

Peripheral devices such as blood gas analysers or blood pressure monitors can be integrated into an extended data acquisition area.

Overview of the status of current treatments

Any treatment information is readily available and clearly structured.

Automatic treatment documentation

The Therapy Monitor supports the user in the documentation of the treatment process, administered medication, events, and modifications in the treatment process.

Integrated solution – Initial pre-setting of the device

Bed-side monitoring with dXp

All information at a glance
